Radiology Department

Patient: Steif, Gabriel MRN-V#: 3134344-1 DOB: 04/25/37 Age: 70Y Sex: M

Location: 000 - Adult ER

DOS: 27 Feb 08 0900  
Head CT\*

I, Alexander Baxter MD, have personally reviewed the images and agree with the preliminary report below. This report now represents the FINAL REPORT for this patient.

\*\*\*\*\*  
RESIDENT PRELIMINARY REPORT  
\*\*\*\*\*

History: Trauma slot. Hit by bus

CT Head without intravenous contrast: 5mm contiguous axial slices reviewed in brain, subdural and bone windows.

Comparison: None

Findings:

Right frontal scalp laceration with associated subcutaneous air and soft tissue swelling. Skin defect extends to calvarial surface. Additional subcutaneous air seen over occiput without associated fracture.

Prominent sulci, consistent with age-related volume loss. Normal gray white matter differentiation. No midline shift, mass effect, or evidence of intracranial hemorrhage. No focal areas of abnormal attenuation are identified within the parenchyma of the brain. Semicircular partially calcific density anterior to left temporal pole (image 12/32) may represent a small calcified meningioma versus volume averaging of the sphenoid bone.

Normal ventricular size and configuration without hydrocephalus.

Patient: Steif, Gabriel MRN-V#: 3134344-1 DOB: 04/25/37 Age: 70Y Sex: M

Location: 000 - Adult ER

DOS: 27 Feb 08 0900  
Head CT\*

Numerous cortical lucencies at skull vertex, likely age related. No skull fracture.

Vascular calcifications. Layering fluid in posterior left maxillary sinus, consistent with sinusitis. Remaining portions of the paranasal sinuses, mastoid air cells, and tympanic cavities are clear. Status post left cataract surgery.

Impression: No acute intracranial pathology. Right frontal skin laceration extends to calvarial surface. Small left temporal calcified meningioma versus volume averaging. Left maxillary sinusitis.

## TEST RESULTS SUMMARY

-PERMANENT CHART COPY-

SUMMARY: 11/21 22:38 TO 23:59 03/21

HEAD CT:

FINDINGS: NONSPECIFIC DIFFUSE ATROPHY. PROMINENCE OF EXTRA-AXIAL SPACE OVER THE FRONTAL CONVEXITIES, POSSIBLY SECONDARY TO CEREBRAL ATROPHY. HOWEVER, CHRONIC SUBDURAL HEMATOMA OR SUBDURAL HYGROMA CANNOT BE EXCLUDED. LIKELY CHRONIC SMALL-VESSEL ISCHEMIC CHANGES. NO EVIDENCE FOR MASSES, HEMATOMA, OR SHIFT OF MIDLINE STRUCTURES. INTACT CALVARIUM. OCCIPITAL SCALP SOFT TISSUE SWELLING. MILD PARANASAL SINUS DISEASE.

IMPRESSION: NO ACUTE INTRACRANIAL FINDINGS.

DICTATED BY: CHANG, RICHARD , M.D.

ABOVE IS A PRELIMINARY REPORT FROM VRP. BELOW IS THE ADDENDED FINAL REPORT.

----- IN ADDITION TO THE ABOVE FINDINGS, THERE IS A SMALL AMOUNT OF GAS IN THE SCALP OF THE RIGHT FOREHEAD , A SMALL EXTERNAL TABLE OF LEFT FRONTAL BONE OSTEOMA, PRIOR LENS SURGERY ON THE RIGHT.

OTHERWISE I AGREE WITH THE ABOVE FINDINGS.

=====

READER: NAIDICH, THOMAS	02/29 11:32	ORD#	24.01
ORDER: CT CERVICAL SPINE	FILE#:	NOT FILED	
INDICATIONS: TRAUMA. PEDSTRUCK. H/O LOC			

CERVICAL SPINE CT:

FINDINGS: REVERSAL OF THE NORMAL CERVICAL LORDOSIS. VERTEBRAL BODIES HEIGHT PRESERVED. MODERATE DEGENERATIVE CHANGES. PREVERTEBRAL SPACE IS WITHIN NORMAL LIMITS. NO FRACTURES SEEN.

IMPRESSION: STRAIGHTENING POSSIBLY SECONDARY TO PAIN VERSUS MUSCLE SPASM.

DICTATED BY: CHANG, RICHARD , M.D.

ABOVE IS A PRELIMINARY REPORT FROM VRP. BELOW IS THE ADDENDED FINAL
